Health Impact Assessment John Kemm, Jayne Parry, Stephen Palmer, Stephen R. Palmer, 2004-04 This book gives a comprehensive overview of the concepts, theory, techniques and applications of Health Impact Assessment to aid all those preparing projects or carrying out assessments. It draws on examples and thinking from many different disciplines and many parts of the world. This is the first easily accessible book, which reviews the whole field. It is likely to become the standard reference for HIA and the first place that anyone seeking to learn about the subject will turn.

Health Impact Assessment Martin Birley, 2013-10-18 Health Impact Assessment (HIA) is primarily concerned with the future consequences of plans, proposals and policies on the health of communities. It is a rapidly growing complement to Environmental Impact Assessment, increasingly mandated by national and international requirements. Guidelines have been produced by many national and international organizations and it is being introduced in a number of undergraduate or postgraduate university curricula. However, there has been until now no broad-based, introductory text of international scope to the subject, suitable for both these courses and for professional training. The purpose of this book is to fill this gap and to introduce the subject of Health Impact Assessment using plain language, in both general and specific contexts and with reference to both market and less developed economies. As a result, the reader should be able to describe what HIA can and cannot achieve, identify the components of a successful HIA and participate in an assessment as a member of a team. Examples are provided from a number of planning and development sectors, including extractive industry, water resource management, and housing. The reader, whether student or professional, need not be a health specialist, although prior knowledge of some public or environmental health would be an advantage.

Health Impact Assessment in the United States Catherine L. Ross, Marla Orenstein, Nisha Botchwey, 2014-03-12 A new public policy initiative is proposed, or a large-scale construction project. What is its potential impact on the health of the population? Are there adverse effects to address, health benefits to be promoted, some combination of both? A Health Impact Assessment (HIA) is a cross-disciplinary means of answering these and other complex questions, so programs, projects, or

policies can be adjusted accordingly. Health Impact Assessment in the United States analyzes the goals, tools, and methods of HIA, and the competencies that are central to establishing best practices. It sets out the core principles that differentiate HIA from environmental and similar assessments, fleshing them out with case examples from the U.S. and abroad. Details of each step of the HIA process take follow-through into account, giving readers insights into not only collecting and evaluating data, but also communicating findings effectively to decision-makers and stakeholders. The book's expert coverage includes: The importance of HIA to policy development. Introduction to public health, community planning, and health assessment. Overview of the core concepts of HIA, with illustrative examples. Step-by-step guide to conducting an HIA, from screening to evaluation. Emerging technologies shaping HIA tools and procedures. Appendices featuring sample assessment sections and other resources. The HIA has an increasingly vital place in the future of health-related policy, making Health Impact Assessment in the United States a valued manual and critical ideabook for students and practitioners in public health, public policy, urban planning, and community planning. "This book charts the growth of HIA in the United States, and provides invaluable guidance on conducting HIAs and utilizing their results. Very highly recommended." Howard Frumkin, MD, DrPH, Dean, University of Washington School of Public Health "This new book by three internationally recognized leaders in the field provides a practical guide to using this tool to identify important but often unrecognized opportunities and risks for health created by decisions in transportation, housing, energy, and other sectors." Aaron Wernham, Director of the Health Impact Project, a collaboration of the Robert Wood Johnson Foundation and The Pew Charitable Trusts. "This book makes an important contribution to the health impact assessment field and is a great resource for practitioners, researchers and students... it helps the reader to not only understand HIA but to do it." Ben Harris-Roxas, Conjoint Lecturer, Centre for Primary Health Care and Equity, University of New South Wales; Health Section Co-Chair, International Association for Impact Assessment; Consultant, Harris-Roxas Health. "Health Impact Assessment in the United States is an important resource... helping to uncover hidden causes of health inequities in proposals and identifying potential solutions before the proposals are implemented." Angela Glover Blackwell, Founder and CEO, PolicyLink

Integrating Health Impact Assessment with the Policy Process Monica O'Mullane, 2013-04-11 Health Impact Assessment is a policy-support instrument and approach that seeks to assess the health impacts of projects, programmes and policies on population health. The ultimate goal of HIA is to systematically predict health impacts and subsequently inform the intersectoral decision- and policy-making processes of these impacts. Integrating Health Impact Assessment with the Policy Process examines how the process of integrating HIA with policy can take place. Introductory chapters outline the HIA process and provide a conceptual foundation for the book. Then, drawing from experiences of HIA practice and research globally, country specific experiences are presented to examine HIA's relationship with the policy process. Throughout the book checklists and learning points are provided to assist the readers' understanding of the concepts and examples

discussed. This practical and conceptually-grounded guide represents a convergence of theory and practice from the disciplines of public health, environmental health and the social sciences, and will appeal to practitioners and professionals in these fields, as well as policy-makers, decision-makers, planners at regional and national government levels as well as academics, educators and students.

Impact Evaluation in Practice, Second Edition Paul J. Gertler,Sebastian Martinez,Patrick Premand,Laura B. Rawlings,Christel M. J. Vermeersch,2016-09-12 The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

Social Determinants of Health in Non-communicable Diseases Katsunori Kondo,2021-11-04 This book is open access under a CC BY-NC-ND 4.0 license. This open access book is the first compilation that reviews a wide range of social determinants of health (SDHs) for non-communicable diseases (NCDs) and healthy ageing in Japan. With the highest life expectancy and the largest elderly population in the world, Japan has witnessed health inequality by region and social class becoming more prevalent since the 2000s. The first half of this volume describes in detail major NCDs, such as cancers, heart and kidney diseases, diabetes, stroke, and metabolic syndrome. The second half, on the other hand, explores various SDHs relating to healthy ageing. All chapters review and focus on SDHs, particularly health inequality associated with socio-economic status and social capital, which are widely addressed in the field of social epidemiology. The book makes the argument that “Health for All” advocated by the WHO should be implemented based on social justice and benefits for the

greater society. Public health researchers and policymakers, both in Japan and other nations, will gain scientific evidence from this book to prepare for the coming era as ageing becomes a global issue.

Health Impact Assessment John Kemm,2013 Health Impact Assessment is a process which helps decision making by predicting the health consequences of different option choices in terms of policies, plans and projects.

Handbook on Human Rights Impact Assessment Nora Götzmann,2019 Human rights impact assessment (HRIA) has increasingly gained traction among state, business and civil society actors since the endorsement of the United Nations Guiding Principles on Business and Human Rights by the Human Rights Council in 2011. This timely and insightful Handbook addresses HRIA in the context of business and human rights.

Health Impact Assessment for Sustainable Water Management Lorna Fewtrell,David Kay,M. Benjamin,2008-07-15 Health Impact Assessment for Sustainable Water Management is a pioneering international text, exploring and developing this emerging discipline. It is the first to take an international perspective seeking to draw generic lessons from both the developed and developing nations' experience in this new area of activity. The approach is being applied in policy development to strengthen the 'evidence-base' and across a wide spectrum of resource developments, industrial and urban infrastructure projects and in 'aid' projects in developing countries. This book illustrates the importance of considering health in water management developments and demonstrates the role of health impact assessment (HIA) in this process. Case-studies illustrate a range of management approaches to different system implementation issues and scale factors, ranging from domestic rainwater harvesting for the supply of non-potable water to a large-scale hydroelectric project. The concept, objectives, terminology and challenges of HIA are introduced and illustrated by case studies including rainwater harvesting, greywater reuse, sustainable drainage and evaluations of the health impacts of flooding. Developing country case studies include a small-scale irrigation project in Zimbabwe, a large hydro-electric scheme in Lao (Peoples Democratic Republic) and the implementation issues surrounding the use of domestic wastewater as a resource in demand by agricultural enterprises in Pakistan. The case studies illustrate different HIA approaches, including the use of quantitative and qualitative information and provide benchmarks of current practice for practitioners seeking to apply HIA in the emerging agendas in both developed and developing nations. The critical appraisals within each chapter offer both best practice exemplars as well as explanations of problems and mistakes of past project implementation, and define the requirements for the policy communities who will be increasingly required to accommodate HIA information in resource allocation decisions. As a result, this book will be of interest to planners, developers, policy makers, public health, environmental and water utility scientists and practitioners.

Health Impact Assessment Asian Development Bank,2018-10-01 This sourcebook provides up-to-date information regarding ADB environmental safeguards, poverty and social analysis, and compliance procedures in order to support the process of health impact assessment. It is a useful reference for ADB staff, borrowers, executing agencies, consultants, and others seeking a better understanding of how to implement health impact assessments. The publication outlines the procedures, methods, and tools that health impact assessments use to systematically judge the potential effects of a policy, plan, program, or project on the health of a population. It is useful to those who are producing a health impact assessment or public health management plan.

One Health, 2nd Edition Jakob Zinsstag, Esther Schelling, Lisa Crump, Maxine Whittaker, Marcel Tanner, Craig

Stephen,2020-09-30 One Health, the concept of combined veterinary and human health, has now expanded beyond emerging infectious diseases and zoonoses to incorporate a wider suite of health issues. Retaining its interdisciplinary focus which combines theory with practice, this new edition illustrates the contribution of One Health collaborations to real-world issues such as sanitation, economics, food security and vaccination programmes. It includes more non-infectious disease issues and climate change discussion alongside revised case studies and expanded methodology chapters to draw out implications for practice. Promoting an action-based, solutions-oriented approach, *One Health: The Theory and Practice of Integrated Health Approaches* highlights the lessons learned for both human and animal health professionals and students.

Improving Health in the United States National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Health Impact Assessment,2011-10-14 Factoring health and related costs into decision making is essential to confronting the nation's health problems and enhancing public well-being. Some policies and programs historically not recognized as relating to health are believed or known to have important health consequences. For example, public health has been linked to an array of policies that determine the quality and location of housing, availability of public transportation, land use and street connectivity, agricultural practices and the availability of various types of food, and development and location of businesses and industry. *Improving Health in the United States: The Role of Health Impact Assessment* offers guidance to officials in the public and private sectors on conducting HIAs to evaluate public health consequences of proposed decisions -- such as those to build a major roadway, plan a city's growth, or develop national agricultural policies -- and suggests actions that could minimize adverse health impacts and optimize beneficial ones. Several approaches could be used to incorporate aspects of health into decision making, but HIA holds particular promise because of its applicability to a broad array of programs, consideration of both adverse and beneficial health effects, ability to consider and incorporate various types of evidence, and engagement of communities and stakeholders in a deliberative process. The report notes that HIA should not be assumed to be the best approach to every health policy question but rather should be seen as part of a spectrum of public health and policy-oriented approaches. The report presents a six-step framework for conducting HIA of proposed policies, programs, plans, and projects at federal, state, tribal, and local levels, including within the private sector. In addition, the report identifies several challenges to the successful use of HIA, such as balancing the need to provide timely information with the realities of varying data quality,

producing quantitative estimates of health effects, and engaging stakeholders.

Impact Evaluation of Development Interventions Howard White, David A. Raitzer, 2017-12-01 Impact evaluation is an empirical approach to estimating the causal effects of interventions, in terms of both magnitude and statistical significance. Expanded use of impact evaluation techniques is critical to rigorously derive knowledge from development operations and for development investments and policies to become more evidence-based and effective. To help backstop more use of impact evaluation approaches, this book introduces core concepts, methods, and considerations for planning, designing, managing, and implementing impact evaluation, supplemented by examples. The topics covered range from impact evaluation purposes to basic principles, specific methodologies, and guidance on field implementation. It has materials for a range of audiences, from those who are interested in understanding evidence on what works in development, to those who will contribute to expanding the evidence base as applied researchers.

Sleepiness and Human Impact Assessment Sergio Garbarino, Lino Nobili, Giovanni Costa, 2014-04-08 The World Health Organization supports tools and initiatives in Health Impact Assessment to dynamically improve health and well-being across different sectors. Human Impact Assessment (HuIA) is a relatively new concept. It describes an integrated process that encompasses both Health Impact Assessment and Social Impact Assessment and is used to anticipate the effects of programs, projects and decisions on human health and welfare. Sleep occupies approximately one-third of our lives, but its human impact remains largely unrecognized. The prevalence of excessive sleepiness is recognized to be increasing in industrialized societies. Without doubt, sleepiness and fatigue have high costs in terms of both lives lost and socioeconomic impact. For example, the National Highway Traffic Safety Administration estimates that up to 4% of all fatal crashes are caused by drowsy drivers and that as many as 100,000 deaths per year in the United States may be due to fatigue-related medical errors. Sleepiness and Human Impact Assessment provides a uniquely comprehensive exploration of many different facets of sleepiness in our 24-hour society from the new HuIA point of view. Among the covered issues are the physiology and pathophysiology of sleep, its relationship to daytime alertness, fatigue and drugs, the relevance of sleep-related fatigue in various occupational settings and public safety. This book will be of assistance to physicians, occupational health professionals, ergonomists, researchers and decision-makers as they strive to understand the full significance of sleepiness and to create a culture of accountability in everyday life without sleep-related risks.
